4" Submersible motors 40S Series

Submersible oil filled rewindable motors.

- **High starting torque**
- **Rewindable stator**
- **Power supply cable with extractable connector**
- **Mechanical seal**
- **Screws to fix the pump are included**
- **Approvals:**
- D.M. 174/2004

SPECIFICATIONS

- Stainless steel outer sleeve.
- Shaft extension and coupling dimensions to **NEMA** standards.
- **Class insulation:**
155 (F).
- **Protection class:**
IP68.
- Internal fluid suitable for contact with foodstuffs.
- Strong and durable compensating bellows.
- Axial load supported by angular bearings.
- Mechanical seal protected by sand guard.
- **Maximum immersion depth:**
150 m.
- Suitable for both vertical / horizontal installations
- **Maximum number of starts for hour at regular intervals:**
30 for direct start;
20 for impedance start.
- **Maximum water temperature:**
35°C.
Max. temperature applies to motors working in a installation capable of delivering a flow of water around the motor jacket of at least 0,08 m/s.
- **Water pH:**
from 4 to 8.

- **Axial thrust:**
3000 N from 0,37 to 2,2 kW;
6500 N from 3 to 7,5 kW.
- **Versions:**
 - Single-phase:
from 0,37 to 4 kW
220-240 V \pm 6%, 50 Hz
 - Three-phase:
from 0,37 to 7,5 kW
220-240 V, \pm 6%, 50 Hz
380-415 V \pm 6%, 50 Hz

OPTIONAL FEATURES

- Different voltages and frequencies.
- Single-phase version up to 1,1 kW with built-in capacitor and motor protection (2W = Two Wire).
- Upper support with customized material.

For application limits, refer to technical appendix chapter.

ACCESSORIES

- Control panels.
- Drop cables.
- Coupling flanges.
- Cooling sleeves.
- Capacitors.

4" Submersible motors L4C Series

Submersible water filled encapsulated motors.

SPECIFICATIONS

- Stainless steel outer sleeve.
- Shaft extension and coupling dimensions to **NEMA** standards.
- **Class insulation:** 155 (F).
- **Protection class:** IP68.
- Internal fluid suitable for contact with foodstuffs.
- Strong and durable compensating bellows.
- Axial load supported by angular bearings.
- Mechanical seal protected by sand guard.
- **Maximum immersion depth:** 300 m.
- Suitable for both vertical / horizontal installations
- **Maximum number of starts per hour at regular intervals:** 40 for direct start; 20 for impedance start.
- **Maximum water temperature:** 35°C.
Max. temperature applies to motors working in a installation capable of delivering a flow of water around the motor jacket of at least 0,3 m/s.
- **Axial thrust:** 2000 N from 0,37 to 1,1 kW; 3000 N from 1,5 to 2,2 kW; 6000 N from 3 to 7,5 kW.

- **High starting torque**
- **Power supply cable with extractable connector**
- **Mechanical seal**
- **Kingsbury type thrust bearing**
- **Screws to fix the pump are included**

• Versions:

- Single-phase:
from 0,37 to 4 kW
(until 1,1 kW with built in automatic reset overload protection).
220-240 V ± 6% 50 Hz
- Three-phase:
from 0,37 to 5,5 kW
220-240 V ± 6% 50 Hz
from 0,37 to 7,5 kW
380-415 V ± 6% 50 Hz

OPTIONAL FEATURES

- Different voltages and frequencies
- Single-phase version up to 1,1 kW with built-in capacitor and motor protection (2W = Two Wire).
- Upper support with customized material.

For application limits, refer to technical appendix chapter.

ACCESSORIES

- Control panels.
- Drop cables.
- Coupling flanges.
- Cooling sleeves.
- Capacitors.

6" Submersible motors L6C Series

Submersible water filled encapsulated motors.

- **High starting torque**
- **Power supply cable with extractable connector**
- **Mechanical seal**
- **Kingsbury type thrust bearing**
- **Screws to fix the pump are included**

SPECIFICATIONS

- Stainless steel outer sleeve.
- Shaft extension and coupling dimensions to **NEMA** standards.
- **Class insulation:** 155 (F).
- **Protection class:** IP68.
- Internal fluid suitable for contact with foodstuffs.
- Strong and durable compensating bellows.
- Axial load supported by angular bearings.
- Mechanical seal protected by sand guard.
- **Maximum immersion depth:** 250 m.
- Suitable for both vertical / horizontal installations
- **Maximum number of starts per hour at regular intervals:** 25 for direct start.
- **Maximum water temperature:** 35°C.
Max. temperature applies to motors working in an installation capable of delivering a flow of water around the motor jacket of at least 0,2 m/s.
- **Axial thrust:** 16000 N from 4 to 22 kW; 27000 N from 30 to 37 kW.

• Version:

- Three-phase:
from 4 to 22 kW
220-240 V ± 6% 50 Hz
- from 4 to 37 kW
380-415 V ± 6% 50 Hz

OPTIONAL FEATURES

- Silicon Carbide mechanical seal.
- Different voltages and frequencies.
- Motors with double cable outlet for star/delta start can be supplied upon request.
- Temperature sensor **PT 100 / PTC.**

For application limits, refer to technical appendix chapter.

ACCESSORIES

- Control panels.
- Drop cables.
- Coupling flanges.
- Cooling sleeves.

l6c-2p50_en_g_te

6" Submersible motors L6W Series

Submersible water filled rewindable motors.

- **Rewindable stator**
- **Mechanical seal**
- **Kingsbury type thrust bearing**
- **Screws to fix the pump are included**
- **Approvals:**
 - ACS
 - D.M. 174/2004

SPECIFICATIONS

- Stainless steel outer sleeve.
- Shaft extension and coupling dimensions to **NEMA** standards.
- **Class insulation:**
70 for standard version.
85 for HT version.
- **Protection class:**
IP68.
- Internal fluid suitable for contact with foodstuffs.
- Strong and durable compensating bellows.
- Axial load supported by angular bearings.
- Mechanical seal protected by sand guard.
- **Maximum immersion depth:**
350 m.
- Suitable for both vertical / horizontal installations
- **Maximum number of starts per hour at regular intervals:**
15.
- **Maximum water temperature:**
30°C for standard version
45°C for HT version
Max. temperature applies to motors working in a installation capable of delivering a flow of water around the motor jacket as following:
 - 0,2 m/s for version:
 - standard from 4 to 9,3 kW
 - HT from 4 to 7,5 kW
 - 0,3 m/s for version:
 - standard from 11 to 30 kW
 - HT from 9,3 to 26 kW
 - 0,5 m/s for version:
 - standard from 37 kW
 - HT from 30 kW.

• Axial thrust:

16000 N from 4 to 22 kW;
30000 N from 26 to 37 kW.

• Version:

Three-phase:
from 4 to 37 kW
380-415 V ± 6% 50 Hz

OPTIONAL FEATURES

- Silicon Carbide mechanical seal.
- **L6WN** version realized of stainless steel.
- **L6WR** version realized of AISI 316 Duplex stainless steel.
- **HT** version for high temperature.
- Different voltages and frequencies
- Motors with double cable outlet for star/delta start can be supplied upon request.

For application limits, refer to technical appendix chapter

ACCESSORIES

- Temperature sensor **PT 100 / PTC.**
- Control panels.
- Drop cables
- Coupling flange.
- Cooling sleeve.

L6W MOTOR SERIES IDENTIFICATION CODE

EXAMPLE: L6W110T406/A HT

L6W = Motor series L6W
110 = Rated power 11 kW
T = Three-phase
40 = Voltage 380-415 V
6 = Frequency 60 Hz.
HT = high temperature.

8" Submersible motors L8W Series

Submersible water filled rewindable motors.

- **Rewindable stator**
- **Mechanical seal**
- **Kingsbury type thrust bearing**
- **Approvals:**
 - ACS
 - D.M. 174/2004

SPECIFICATIONS

- Stainless steel outer sleeve.
- Shaft extension and coupling dimensions to **NEMA** standards.
- **Class insulation:**
70 for standard version.
85 for HT version.
- **Protection class:**
IP68.
- Internal fluid suitable for contact with foodstuffs.
- Strong and durable compensating bellows.
- Axial load supported by angular bearings.
- Mechanical seal protected by sand guard.
- **Maximum immersion depth:**
350 m.
- Suitable for both vertical / horizontal installations
- **Maximum number of starts per hour at regular intervals:**
10 .
- **Maximum water temperature:**
30°C for standard version
45°C for HT version
Max. temperature applies to motors working in a installation capable of delivering a flow of water around the motor jacket of at least 0,5 m/s.
- **Axial thrust:**
50000 N from 30 to 93 kW.
- **Version:**
Three-phase:
from 30 to 93 kW
380-415 V \pm 6% 50 Hz

OPTIONAL FEATURES

- Silicon Carbide mechanical seal.
- **L8WN** version realized of stainless steel.
- **L8WR** version realized of AISI 316 Duplex stainless steel
- **HT** version for high temperature.
- Different voltages and frequencies.
- Motors with double cable outlet for star/delta start can be supplied upon request.

For application limits, refer to technical appendix chapter.

ACCESSORIES

- Temperature sensor **PT 100 / PTC.**
- Control panels.
- Drop cables
- Coupling flange.
- Cooling sleeve.
- Screws to fix the pump.

**L8W - L8WN - L8WR MOTOR SERIES
MOTOR CROSS SECTION**

10" Submersible motors L10W Series

Submersible water filled rewindable motors.

SPECIFICATIONS

- **Stainless steel** outer sleeve.
- Shaft extension and coupling dimensions to **NEMA** standards.
- **Class insulation:**
70 for standard version.
85 for HT version.
- **Protection class:**
IP68.
- Internal fluid suitable for contact with foodstuffs.
- Strong and durable compensating bellows.
- Axial load supported by angular bearings.
- Mechanical seal protected by sand guard.
- **Maximum immersion depth:**
350 m.
- Suitable for both vertical / horizontal installations from the pump to the motor.
- **Maximum number of starts per hour at regular intervals:**
8.
- **Maximum water temperature:**
30°C for standard version
45°C for HT version
Max. temperature applies to motors working in a installation capable of delivering a flow of water around the motor jacket of at least 0,5 m/s.
- **Axial thrust:**
65000 N from 83 to 150 kW.
- **Version:**
Three-phase:
from 83 to 150 kW
380-415 V ± 6% 50 Hz

OPTIONAL FEATURES

- Silicon Carbide mechanical seal.
- **L10WN** version realized of stainless steel.
- **L10WR** version realized of AISI 316 Duplex stainless steel.
- **HT** version for high temperature.
- Different voltages and frequencies.
- Motors with double cable outlet for star/delta start can be supplied upon request.
- Supply cable available with junction or not.

For application limits, refer to technical appendix chapter.

ACCESSORIES

- Temperature sensor **PT 100 / PTC.**
- Control panels.
- Drop cables
- Coupling flange.
- Cooling sleeve.
- Screws to fix the pump.

- **Rewindable stator**
- **Mechanical seal**
- **Kingsbury type thrust bearing**
- **Approvals:**
 - ACS
 - D.M. 174/2004

Is/In = ratio between starting current and nominal current.

12" Submersible motors L12W Series

Submersible water filled rewindable motors.

- **Rewindable stator**
- **Power supply cable with extractable connector**
- **Mechanical seal**
- **Kingsbury type thrust bearing**
- **Approvals:**
 - ACS
 - D.M. 174/2004

SPECIFICATIONS

- **Stainless steel** outer sleeve.
- Shaft extension and coupling dimensions to NEMA standards.
- **Class insulation:**
70 for standard version.
85 for HT version.
- **Protection class:**
IP68.
- Internal fluid suitable for contact with foodstuffs.
- Strong and durable compensating bellows.
- Axial load supported by angular bearings.
- Mechanical seal protected by sand guard.
- **Maximum immersion depth:**
350 m.
- Suitable for both vertical / horizontal installations
- **Maximum number of starts per hour at regular intervals:**
4.
- **Maximum water temperature:**
30°C for standard version
45°C for HT version
Max. temperature applies to motors working in a installation capable of delivering a flow of water around the motor jacket of at least 0,5 m/s.
- **Axial thrust:**
65000 N from 185 to 300 kW.
- **Version:**
Three-phase:
from 150 to 300 kW
380-415 V \pm 6% 50 Hz
Star-delta starting is standard for all model ,except for G12W1850T405.

OPTIONAL FEATURES

- Silicon Carbide mechanical seal.
- **L12WN version** realized of AISI 316 stainless steel.
- **L12WR version** realized of AISI 316 Duplex stainless steel.
- **HT version** for high temperature.
- Different voltages and frequencies
- Motors with double cable outlet for star/delta start can be supplied upon request (only for L12W1850T405).
- Supply cable available with junction or not.

For application limits, refer to technical appendix chapter.

ACCESSORIES

- Temperature sensor **PT 100 / PTC.**
- Control panels.
- Drop cables
- Coupling flange.
- Cooling sleeve.

**L12W - L12WN - L12WR MOTOR SERIES
MOTOR CROSS SECTION**

L12W MOTOR SERIES IDENTIFICATION CODE

EXAMPLE: L12W1850T405/A HT

L12W = Motor series L12W
1850 = Rated power 185 kW
T = Three-phase
40 = Voltage 380-415 V
5 = Frequency 50 Hz.
HT = high temperature.

MOTOR

With the "Energy using Products" (EuP 2005/32/EC) and "Energy related Products" (ErP 2009/125/EC) directives, the European Commission has established requirements for promoting the use of products with low power consumption.

Among the various products considered there are also some typologies of pumps with the characteristics defined by the specific **Regulation (EU) n. 547/2012** implementing the requirements of Directives EuP and ErP.

In the case of submersible engines, designed to operate immersed in the liquid (Article 1, paragraph 2 letter a), is required inform about the below data:

THREE-PHASE MOTOR 50 Hz, 2 POLI

4OS-LC-LW-derating-en_b_te

EXAMPLE 1

A 2,2 kW 4OS motor is to be used in 50°C water.
Motor power at 50 °C = $2,2 \times 0,7 = 1,54$ kW

EXAMPLE 2

A 2,2 kW L4C motor is to be used in 50°C water.
Motor power at 50 °C = $2,2 \times 0,85 = 1,87$ kW

EXAMPLE 3

A 7,5 kW L6C motor is to be used in 45°C water.
Motor power at 50 °C = $7,5 \times 0,8 = 6$ kW

EXAMPLE 4

A 15 kW L6W motor is to be used in 35°C water.
Motor power at 35 °C = $15 \times 0,75 = 11,25$ kW

SELECTING CABLE CROSS-SECTIONS FOR SUBMERSIBLE MOTORS

To select the cross-section of power cables for submersible pumps, consult the tables shown below. In these tables, the maximum lengths of the power cable for each cross-section are shown for each motor and next to the various input voltage ratings.

Therefore, to find the required cable cross-section, simply read off the maximum permitted lengths for each cross-section next to the selected motor and required input voltage.

E.g.:

A 120 m long power cable must be matched with a 230V L4C07M235 motor.

To determine the cross-section of the cable, simply move along the row of the 230V motor until you find the maximum length of 120 m or immediately above it and then read off the corresponding cross-section in that column.

In this case, the 4 mm² cable is selected.

N.B.: the tables include specific data (current and power factor) for each motor and voltage rating based on a maximum voltage drop of 4% (HD 384.5), a maximum cable temperature of 90°C, water installation similar to air installation at a temperature of 30°C.

CABLE TYPES

CALCULATING THE SPEED OF THE FLUID THAT FLOWS AROUND A SUBMERGED MOTOR AND SIZING OF THE COOLING SLEEVE

The following formula is used to verify whether the speed of the fluid that flows around the motor of a submersible pump is high enough to guarantee the proper cooling of the motor:

$$v = \frac{\frac{Q}{2}}{\pi \cdot \left(\frac{D^2}{4} - \frac{d^2}{4} \right)}$$

Where:

- Q** in [m³/s] is the operating flow rate of the electric pump; only half of this flow is taken into account, because the fluid which is sucked into the area of the filter (2), comes from the motor side (3) as well as from the pump side (1);
- D** in [m] is the diameter of the well;
- d** in [m] is the diameter of the motor (3);
- v** in [m/s] is the calculated speed of the fluid that flows around the motor.

Now, compare the speed thus calculated (v) with the minimum speed required for correct cooling of the motor (v_m): if $v \geq v_m$ it means that the motor is properly cooled, if $v < v_m$ will be necessary to mount a cooling sleeve (4).

Example:

An electric pump OZ630/12 (motor diameter $d = 0.144$ m) operates in an 8" well (well diameter $D = 0.203$ m) with flow rate $Q = 20$ m³/h = 0.0055 m³/s.
Speed of fluid $v = (0.0055/2) / \{ \pi \cdot [(0.203)^2/4 - (0.144)^2/4] \} = 0.17$ m/s.
The minimum speed required for proper motor cooling is $v_m = 0.20$ m/s.
Because $v < v_m$, it will be necessary to mount a cooling sleeve.

The following formula is used to determine the maximum diameter of a cooling sleeve to be mounted on a submersible motor:

$$D = \sqrt{4 \cdot \left(\frac{Q}{v \cdot \pi} + \frac{d^2}{4} \right)}$$

Where:

- Q** in [m³/s] is the operating flow rate of the electric pump; the entire flow is taken into account because the fluid comes from the motor side (3) only;
- D** in [m] corresponds to the diameter of the cooling sleeve (4);
- d** in [m] corresponds to the diameter of the motors (3);
- v_m** in [m/s] is the minimum speed of the fluid that flows around the motor.

If the electric pump operates at different flow rate, the minimum flow rate must be taken into account for calculating the diameter of the cooling sleeve.

Example:

A motor coupled to the electric pump OZ615/24 (motor diameter $d = 0.144$ m), which operates with flow rate $Q = 15$ m³/h = 0.0042 m³/s, requires a minimum speed of the fluid of $v_m = 0.20$ m/s.
Cooling sleeve diameter $D = \{ 4 \cdot [(0.0042 / (0.2 \cdot \pi)) + (0.144)^2/4] \}^{0.5} = 0.217$ m.

ASYNCHRONOUS MOTOR STARTING SYSTEMS

Direct

Suitable for low-power motors.
 The starting current (I_s) is much higher than the rated current (I_n).
 $I_s = I_n \times 4 \div 8$
 $T_s = T_n \times 2 \div 3$

Indirect

• Star/Delta

The starting current (I_s) is three times less than the direct starting current.
 $I_s = I_n \times 1.3 \div 2.7$
 $T_s = T_n \times 0.7 \div 1$
 In the star to delta changeover phase (approx. 70 ms) the motor is not supplied and tends to reduce its rotation speed.
 In the case of submersible electric pumps with power above 10 HP, the modest mass of the rotor causes a slowdown at changeover, so that the initial Star supply phase is rendered partially useless.
 In such cases we recommend using impedance panels or an autotransformer.

• Impedances

The motor is started with a voltage which is lower than the rated one, and which is obtained by means of impedances.
 The Lowara panels use impedances which cut down to 70% the starting voltage.
 The switch to the rated voltage takes place without any interruptions of the power supply.

Rated voltage $U_n = 400 \text{ V}$
 Starting voltage $U_s = U_n \times 0,7 = 280 \text{ V}$

Starting current

$$I_s = I_n \times 4 \div 8 \times \left(\frac{U_s}{U_n} \right) = I_n \times 3 \div 6$$

Starting torque

$$T_s = T_n \times 2 \div 3 \times \left(\frac{U_s}{U_n} \right)^2 = T_n \times 1 \div 1,5$$

Autotransformer

The pump is started with a voltage which is lower than the rated one.
 The Lowara panels use an autotransformer with a voltage that is 70% the value of the line voltage.
 The switch to the rated voltage occurs without any interruptions of the power supply.
 Rated voltage $U_n = 400 \text{ V}$

Starting current

$$I_s = I_n \times 4 \div 8 \times \left(\frac{U_s}{U_n} \right) = I_n \times 3 \div 6$$

Starting torque

$$T_s = T_n \times 2 \div 3 \times \left(\frac{U_s}{U_n} \right)^2 = T_n \times 1 \div 1,5$$

WATER REQUIREMENTS IN CIVIL USERS

Determination of the water requirement depends on the type of users and contemporaneity factor. The calculation may be subject to regulations, standards or customs that may vary from country to country. The calculation method shown below is an example based on practical experience, designed to provide a reference value and not a substitute for detailed analytical calculation.

Water requirements in condominiums.

The **consumption table** shows the maximum values for each delivery point, depending on the plumbing amenities.

MAXIMUM CONSUMPTION FOR EACH DELIVERY POINT

TYPE	CONSUMPTION (l/min)
Sink	9
Dishwasher	10
Washing machine	12
Shower	12
Bathtub	15
Washbasin	6
Bidet	6
Flush tank WC	6
Controlled flushing system WC	90

The **sum of the water consumption values** of each delivery point determines the maximum theoretical requirement, which must be reduced according to the **contemporaneity coefficient**, because in actual fact the delivery points are never used all together.

$$f = \frac{1}{\sqrt{(0,857 \times Nr \times Na)}} \quad \text{Coefficient for apartments with one bathroom and flush tank WC}$$

$$f = \frac{1}{\sqrt{(0,857 \times Nr \times Na)}} \quad \text{Coefficient for apartments with one bathroom and controlled flushing system WC}$$

$$f = \frac{1,03}{\sqrt{(0,545 \times Nr \times Na)}} \quad \text{Coefficient for apartments with two bathrooms and flush tank WC}$$

$$f = \frac{0,8}{\sqrt{(0,727 \times Nr \times Na)}} \quad \text{Coefficient for apartments with two bathrooms and controlled flushing system WC}$$

f= coefficient; Nr= number of delivery points; Na= number of apartments

The **table of water requirements in civil users** shows the maximum contemporaneity flow-rate values based on the **number of apartments** and the type of WC for apartments with one bathroom and two bathrooms. As regards apartments with one bathroom, 7 drawing points have been taken into consideration, while 11 points have been considered for apartments with two bathrooms. If the number of drawing points or apartments is different, use the formulas to **calculate** the requirement.

TABLE OF WATER REQUIREMENTS IN CIVIL USERS

For seaside resorts, a flow rate increased by at least 20% must be considered.

G-at-fi-en_a_th

WATER REQUIREMENTS FOR COMMUNITY BUILDINGS

The requirements of buildings intended for specific uses, such as **offices, residential units, hotels, department stores, nursing homes** and so on, are different from those of condominiums, and both their global daily water consumption and the maximum contemporaneity flow rate are usually greater.

The **diagram of water requirements for community buildings** shows the maximum contemporaneity flow rate of some types of communities, for guidance.

These requirements must be determined case by case with the utmost accuracy, using analytical calculation methods, according to particular needs and local provisions.

For seaside resorts, the flow rate must be increased by at least 20%.

- 1= Offices (N. of people)
- 2= Department stores (N. of people)
- 3= Nursing homes (N. of beds)
- 4= Hotels, residences (N. of beds)

NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height h_z at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (\text{NPSHr} + 0.5) + h_f + h_{pv} \text{ ①}$$

where:

h_p is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid; h_p is the quotient between the barometric pressure and the specific weight of the liquid.

h_z is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.; h_z is negative when the liquid level is lower than the pump axis.

h_f is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.

h_{pv} is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid. h_{pv} is the quotient between the P_v vapour pressure and the liquid's specific weight.

0,5 is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (4° C) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

Water temperature (°C)	20	40	60	80	90	110	120
Suction loss (m)	0,2	0,7	2,0	5,0	7,4	15,4	21,5

Elevation above sea level (m)	500	1000	1500	2000	2500	3000
Suction loss (m)	0,55	1,1	1,65	2,2	2,75	3,3

Friction loss is shown in the tables at pages 117-118 of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at ~15°C $\gamma = 1 \text{ kg/dm}^3$

Flow rate required: 30 m³/h

Head for required delivery: 43 m.

Suction lift: 3,5 m.

The selection is an FHE 40-200/75 pump whose NPSH required value is, at 30 m³/h, di 2,5 m.

For water at 15 °C

$$h_p = P_a / \gamma = 10,33\text{m}, h_{pv} = P_v / \gamma = 0,174\text{m} (0,01701 \text{ bar})$$

The H_f flow resistance in the suction line with foot valves is ~ 1,2 m.

By substituting the parameters in formula ① with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2,5 + 0,5) + 1,2 + 0,17$$

from which we have: 6,8 > 4,4

The relation is therefore verified.

FLOW RESISTANCE

TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate valve	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Foot check valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en_b_th

The table is valid for the Hazen Williams coefficient $C = 100$ (cast iron pipework):

-For steel pipework, multiply the values by 1.41.

-For stainless steel, copper and coated cast iron pipework, multiply the values by 1.85.

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by the manufacturers.

VOLUMETRIC CAPACITY

**FURTHER PRODUCT SELECTION
AND DOCUMENTATION**
Xylect™

Xylect™ is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

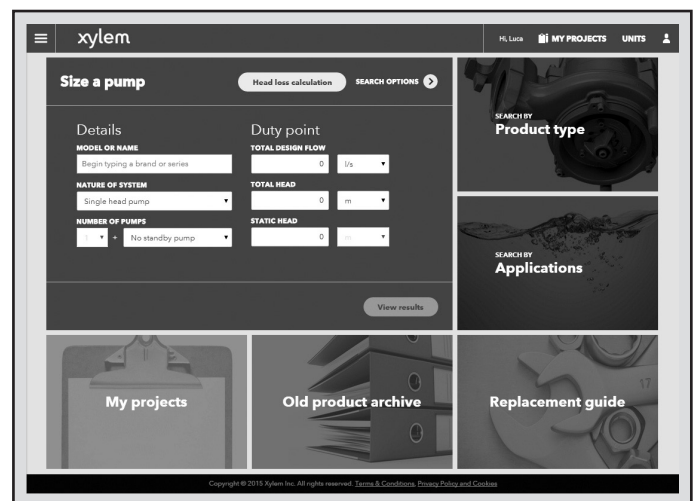

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect™ gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

The search by application guides users not familiar with the product range to the right choice.

FURTHER PRODUCT SELECTION AND DOCUMENTATION

Xylect™

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect™ is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect™ users

Every registered user has a proper space, where all projects are saved.

For more information about Xylect™ please contact our sales network or visit www.xylect.com.

Dimensional drawings appear on the screen and can be downloaded in dxf format.

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and reused in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services, and agricultural settings. With its October 2016 acquisition of Sensus, Xylem added smart metering, network technologies and advanced data analytics for water, gas and electric utilities to its portfolio of solutions. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.

For more information on how Xylem can help you, go to xylem.com.
