

Multistage Pumps

Vogel Series P, PVa, MP 300

Technical Data

Performance range:

- Capacities up to 1800m³/h (8800USgpm)
 - Head up to 300m (1000feet)
 - Max. speed up to 1750rpm
- Multistage pumps of series MP with smaller capacities and max. speed up to 3600rpm), refer to separate brochure

Sizes:

- DN 80 up to DN 300 (3" up to 12") discharge

Temperature:

- max. 140°C (284°F)

Casing pressure:

- up to 45bar (650psig)
- For more detailed information about operation limits with regard to material of construction and operating conditions please refer to data sheets or actual quotations.

Handled liquids:

- Clean and slightly contaminated fluids (without bigger solids)
- hot and cold water
- condensate
- oil suspensions
- acids as well as their watery solutions
- caustic solutions
- brine

Application:

- water supply
- booster systems
- irrigation
- fire fighting
- cooling circuits
- boiler feed
- condensate
- district heating
- osmosis and ultra filtration
- spray water systems
- cleaning systems
- mining

We have developed and manufactured multistage pumps since 1910. Our application and manufacturing expertise provide you with the BEST SOLUTION to meet your pumping needs.

Modular System

Multistage pumps utilize a modular design concept which maximizes component interchangeability. As such, multiple design configurations can be engineered to meet customer requirements without compromise to repair part inventories.

The entire performance range is covered by 7 mechanical sizes that hold 9 different hydraulics.

Size	Discharge branch DND [mm]	Suction branch DNs [mm]	Capacity at BEP Q [m ³ /h]	
			50Hz	60Hz
P, PVa 84	80	100	120	140
P, PVa 104	100	125	170	200
P, PVa 124	125	150	250	300
P, PVa 154	150	200	420	500
P, PVa 204	200	250	660	790
P 253	250	300	800	900 ¹⁾
P 254	250	300	980	1100 ¹⁾
MP 300.1	300	400	1200	-
MP 300.2	300	400	1400	-

1) upon request

Hydraulics

Sizes 84-254, closed radial type impellers designed for casing wear ring on both sides. Axial thrust minimized by balance holes for minimum bearing loads and maximum bearing lifetime. Size MP 300.1 and MP 300.2 thrust balanced by a balancing drum.

Size 84-104 P: one piece design for diffuser and casing. Size 124 PA-254 P and MP 300.1, 300.2: two piece design for diffuser and stage casing. Balanced radial forces, minimum shaft deflection, minimum vibrations.

Heavy duty design for long term operation in industrial applications.

All design versions acc. to ISO 5199 / EN 25199

ISO 9001 + 14001 certifications guarantee high quality standards and reliability of our products as well as environmentally friendly production process.

Performance range - 50 Hz, 1450rpm

Performance range - 60 Hz, 1750rpm

Design Versions

Type P, PA, MP 300:

Horizontal design with bearings at both ends, drive-end at discharge side (standard), rotation clockwise, with suction branch left and discharge branch radially upwards, oil lubrication. Counter clockwise rotation and other flange orientations are, optionally available.

Type PVa:

Vertical design with separate thrust bearing and flexible coupling between motor and pump. Standard IEC motors, up to 315kW.

Type PT:

Vertical wet pit configuration
length: max. 10m - 1450 / 1750rpm
Inducer design available.

Design features P:

- Horizontal configuration with outer bearings on both sides.
- Driven by electric motor, combustion engines or steam turbines, via flexible coupling.
- Drive side discharge, clockwise rotation (drive side suction and counter clockwise rotation optionally available).
- Branch directions: suction left viewed from drive end, discharge radially upwards. Branches can be adjusted to meet customer requirements in 90° increments.
- Drive side thrust bearing, two angular contact ball bearings. Suction side roller bearing as floating bearing. Oil lubrication with large oil sump.
- Thermal expansion of pump rotor is internally balanced without affecting the shaft alignment.
- Shaft sealing arrangements (mechanical seal or gland packing) as per „shaft sealing options“.
- Maintenance friendly design. Bearings and shaft seal are maintainable without pump disassembly.

Pump Sets

Accessories available

- baseframes
- couplings
- coupling guards
- motors
- minimum flow valves
- speed control
- special accessories to meet customer requirements

Sizes 84 up to 204 P are available in a space saving vertical design.

Design features PVa:

- Vertical configuration with separate thrust bearing. Grease lubricated with grease nipples.
- Standard motor according to IEC, design V1, up to 315kW.
- Flexible coupling between pump and motor.
- Medium lubricated friction bearing insuction casing.
- Maintenance friendly design. Bearings and shaft seal are maintainable without pump disassembly.

Design features PT:

- Vertical wet pit design.
- Installation length:
1450/1750rpm - max.10 m
- Separate grease lubricated thrust bearing with grease nipples.
- Standard motor according to IEC, design V1.
- Flexible coupling between pump and motor.
- Drive and discharge branch always above liquid level.
- Medium lubricated friction bearings in pump body and shaft section. Number of bearings depending on installation length.
- Suitable for variable speed control.
- Mechanical seal or gland packing available.
- Maintenance friendly design.
- Suction bells, suction strainers or foot valves available.
- Can design available when pumping hot or condensate media.
- Inducer design available for low NPSH applications when pumping liquids close to the boiling pressure.

Shaft Seal Options

Mechanical seals:

Seal chamber dimensions comply with ISO 3096. Mechanical seals of all brands complying with this standard and EN 12756, version „k“ can be used without modification of the standard parts.

An internal flush system guarantees optimum lubrication and cooling of seal faces.

Single mech. seal, Design U
unbalanced up to max.16 bar

Single mech. seal, Design B
balanced up to max. 45 bar

Gland packing:

The availability of gland packings is limited to max. operation pressure of 25bar.

Above 25bar operation pressure only mechanical seals are available.

Cartridge mechanical seal:

Cartridge seals are pre-assembled units that guarantee trouble free mounting as well as reliability. Cartridge seals also minimize the maintenance cost arising while changing the seal.

Single mechanical seal cartridge,
also available with Quench.

Double mechanical seal cartridge with
connection for external flush.

Pumps with more than one discharge - Multioutlet design:

Multistage pumps in Multioutlet design can be fitted with a random number of discharge branches. The pumps are mostly used in fire fighting applications to serve different pressure zones with different pressure levels.

Multioutlet configurations are not only available in horizontal execution for design PM (PMA), but also in vertical execution for design PVAM.

1) Carbon resin impregnated

2) Pure silicon carbide (without free silicon)

Application limits regarding pressure, temperature and speed as well as chemical resistance refer to data sheets or actual quotations.

Optional materials upon request.

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're 12,500 people unified in a common purpose: creating innovative solutions to meet our world's water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.

For more information on how Xylem can help you, go to xylem.com.
